## Roads2HyCom publishes updated results from the Researchers Questionnaire

**In May 2006, EU project Roads2HyCom launched a Questionnaire on hydrogen and fuel cell related research and technology development activity. Today, Roads2HyCom published the latest results from this Researchers Questionnaire. The report can be downloaded from the publications page on [www.roads2hy.com](http://www.roads2hy.com).**

Roads2HyCom has received over 400 entries to its Researcher Questionnaire from organisations engaged in hydrogen or fuel cell related RTD activity. Most of the entries received were from within Europe, with 44% from Germany or UK. The types of organisation that have completed the Researchers Questionnaire range from small independent companies (31%) through to large corporate players (26%) and universities and research centres (37%). End applications appear to be the most popular area of research. Of the entries received, 55% received some national R&D funding for their H<sub>2</sub>&FC research compared with only 46% receiving some EU (Framework) funding.

The Roads2HyCom Researchers Questionnaire will remain live over the next year. Roads2HyCom invites all organisations engaged in hydrogen or fuel cell related research and technology development to complete this questionnaire on-line at [www.roads2hy.com/questionnaire.aspx](http://www.roads2hy.com/questionnaire.aspx). Further updates on the results from the Researchers Questionnaire will be published throughout the duration of the project as more entries are received. A final report on the Researchers Questionnaire results will be delivered at the end of the project in September 2008.
